## Questions:

1. (45 points) A RRP planar robot is shown in the following figure. Its joint variables are  $\theta_1$  and  $\theta_2$ , and  $d_3$ . Its end-effector position and orientation are given by  $P_x$  and  $P_y$ , and  $\phi$ . Derive the inverse kinematics equations for this robot.

Solutions:

$$\Theta_1 + \Theta_2 - 90^\circ = \phi$$

$$P_x = a_1$$
.  $C\Theta_1 + d_3 C\phi$   $----> C\Theta_1 = \frac{P_x - d_3 C\phi}{a_1}$   
 $P_y = a_1$ .  $S\Theta_1 + d_3 S\phi$   $----> S\Theta_1 = \frac{P_y - d_3 S\phi}{a_1}$ 

$$C^2\Theta_1 + S^2\Theta_1 = (\frac{P_x - d_3 C \phi}{a_1})^2 + (\frac{P_y - d_3 S \phi}{a_1})^2 = 1$$

$$d_3^2 - 2(P_x C\phi + P_v S\phi)] d_3 + P_x^2 + P_v^2 - a_1^2 = 0$$

$$d_3 = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

Where:

$$b = -2(P_x C\emptyset + P_y S\emptyset)$$
  

$$c = P_x^2 + P_y^2 - a_1^2$$

$$c = P_x^2 + P_y^2 - a_1^2$$

$$d_{3} = P_{x}C\emptyset + P_{y}S\emptyset \pm \frac{\sqrt{[2(P_{x}C\emptyset + P_{y}S\emptyset)]^{2} - 4(P_{x}^{2} + P_{y}^{2} - a_{1}^{2})}}{2}}{2}$$
Assume  $\Delta = [2(P_{x}C\phi + P_{y}S\phi)]^{2} - 4(P_{x}^{2} + P_{y}^{2} - a_{1}^{2})$ 

If  $\Delta$  < 0, there will be No solution for  $d_3$ .

If  $\Delta$  = 0, there will be only ONE solution for  $d_3$ .

If  $\Delta > 0$ , there will be TWO solutions for  $d_3$ .

$$\theta_1 = \operatorname{atan2}\left(\frac{p_y - d_3 \sin \phi}{a_1}, \frac{p_x - d_3 \cos \phi}{a_1}\right)$$

$$\theta_2 = \frac{\pi}{2} - (\theta_1 - \phi)$$

## 2. (55 points)

The planar PPR robot shown in the figure operates in the vertical plane (*i.e.* gravity acts in the  $-Y_0$  direction). The masses of the links are concentrated at points A, B and C as shown.

Derive the Lagrangian function L and calculate the force/torque for the *i*th joint only. (i depends on the first letter of your Last Name: i=1, when the first letter of your Last Name is from A-I; i=2, when the first letter of your Last Name is from J-R; i=3, when the first letter of your Last Name is from S-Z)

Solutions: (Calculate the force for one joint is sufficient for each student)  $V_A = \dot{d}_1 \Rightarrow K_1 = \frac{1}{2} m_A V_A^2 = \frac{1}{2} m_A \dot{d}_1^2$
